IMOVIX PROFILE

New Software Release for the SprintCam Vvs HD System

October 17, 2011

Source: I-Movix

I-MOVIX announces the availability of the SprintCam Vvs HD 1.2 software release - available in December 2011.

This updated version of the SprintCam Vvs HD technology has been designed and implemented thanks to the very valuable feedbacks received from the community of worldwide operators using the system.

The new operational enhancements included in the software release refers to all four components of the SprintCam Vvs HD system (camera, CCU, OCP and Slow-Motion Remote) and will allow operators to make the most of the capabilities of the ultra motion technology in a simpler and more efficient way - like any other broadcast camera -, and providing ultra slow motion images with an extraordinary quality.

The SprintCam Vvs HD - 1.2 software release will bring major improvements in terms of :

Storage & Recording	▶

Achetez chez un

- efficiency of operations : availability of two return video inputs (in addition to the live and replay outputs), improved lens control, wider operating temperature range of the camera, improved synchronization procedure for replays, just to name a few.

- image quality : availability of Rec 709, SMPTE-C, NTSC and EBU matrix presets, matching presets with other cameras, flare compensation, etc.

- easiness of use : numerous new options on the OCP and the Slow-Motion Remote allowing the user to operate the system in a simpler and convenient way.

If you are interested in the 1.2 software release and want to know more about these new functionalities, do not hesitate to contact us at salesdpt@i-movix.com or to get in touch with your personal contact at [I-MOVIX](#).
