

## New Software Release for the SprintCam Vvs HD System

Make your Ultra Motion Operations Simpler and Smoother

(23/10/2011) I-MOVIX is pleased to announce the availability of the SprintCam Vvs HD 1.2 software release from December 2011.

This updated version of the SprintCam Vvs HD technology has been designed and implemented thanks to the very valuable feedbacks received from the community of worldwide operators using the system.

The new operational enhancements included in the software release refers to all four components of the SprintCam Vvs HD system (camera, CCU, OCP and Slow-Motion Remote) and will allow operators to make the most of the capabilities of the ultra motion technology in a simpler and more efficient way - like any other broadcast camera -, and providing ultra slow motion images with an extraordinary quality.

The SprintCam Vvs HD - 1.2 software release will bring major improvements in terms of :

- **efficiency of operations** : availability of two return video inputs (in addition to the live and replay outputs), improved lens control, wider operating temperature range of the camera, improved synchronization procedure for replays, just to name a few.

- **image quality** : availability of Rec 709, SMPTE-C, NTSC and EBU matrix presets, matching presets with other cameras, flare compensation, etc.

- **easiness of use** : numerous new options on the OCP and the Slow-Motion Remote allowing the user to operate the system in a simpler and convenient way
